# Research on Target Customer Identification and Market Penetration Strategies in the Hong Kong–Mainland China Remittance Market for WeChat Pay HK

---

*From the Perspective of Incremental Market Opportunities*

---

Capstone Advisor: Xi Li  
Capstone #49 Group 2

# HKU Capstone x WeChat Pay HK: Project Background

*A new-user focused study to identify where WPHK can unlock first-time usage in Hong Kong-to-Mainland remittance.*

## Research Focus: Potential New Users / First-Time Conversion

### Market Change

HK–Mainland remittance is becoming **more daily and recurring**, driven by **GBA mobility**, **family support**, **living expenses**, **education**, **work**, and **consumption**.

### WPHK Opportunity

WPHK has strong product fit through speed, convenience, Tencent trust, and WeChat ecosystem integration.

### Growth Gap

The issue is not lack of demand, but unconverted demand. Many potential new users are still **unaware**, **unclear about benefits**, or **comparing by rate, fees**, and **old habits**.

### Research Objective

Mostly using **New-User Data**, this study identifies who to prioritize, where to reach them, and how to reduce barriers to first-time trial.

Who should WPHK prioritize?

Where should WPHK reach them?

How can WPHK convert and retain?

## Online Research: Placement, Survey Paths, and Data Funnel

## \* Touchpoints placement

## 🔗 Online Questionnaire Logic

- A/B branches: A (WPHK users) and B (non-users)
- It formed 6 main terminal paths / path lengths, from short no-demand paths to fuller demand and awareness paths

### Online raw records

final online B sample

with remittance need

## Online Questionnaire Versions

## Data Funnel

Interview Guide Versions

## ① Usage scenario: Start with small-to-medium everyday remittances

WPHK should first position remittance as a routine, small-to-medium transfer tool, rather than leading with large-value transfers.

### 📊 Remittance Purpose Distribution (N=479)

90.6%

Small-to-medium transfers (434/479)

59.1%

Living expenses (283/479)

## ② Priority Conversion Audience Profile

WPHK should prioritize users who have remittance needs, are unfamiliar with WPHK, and care about fees and exchange rates.

 Comparison of identity and cross-border remittance demand rates

Statistical test: Two-proportion z/chi-square  $p = 6.20e-29$  Indicating identity has a highly significant effect on demand.

80.4%

Users with remittance needs report fee / exchange-rate related cost pain (385 / 479)

96.3%

Proportion **willing to try** after learning about the product (259/269)

*\*note: stated willingness to try after introduction, not actual*

68.9%

Remittance **demand** rate among strong cross-border group (vs local 33.0%)

2

## Deep regression: Awareness, identity and channel-preference regression model for structural associations

### Model A: Drivers of bank-main-channel selection

| Predictor                         | OR   | p-value     |
|-----------------------------------|------|-------------|
| Mainlander in HK / "Port-Drifter" | 6.26 | 7.08e-10*** |
| Small-to-Medium Amount            | 1.24 | 0.452       |
| High Frequency Remittance         | 0.88 | 0.612       |

Note:  $n=479$ ,  $AIC=609.8$ . HK migrant status is the strongest predictor of choosing banks as the main channel.

### Model B: Full drivers of selling-point awareness

| Predictor                  | OR   | p-value   |
|----------------------------|------|-----------|
| Income 20,000 – 39,999 HKD | 0.30 | 0.0007*** |
| Strong Cross-border Demand | 0.60 | 0.0486*   |
| Age (18-35 years old)      | 1.15 | 0.724     |

Note:  $n=985$ ,  $AIC=584.3$ . Middle-income groups have significantly lower awareness of selling points, indicating room for education.

### ③ Awareness gap — structural deficit at full-sample level

A WPHK cross-border remittance awareness gap exists significantly at the full-sample level: over half are completely unaware of the function, and the share who fully understand the core selling points (zero handling fee, fast arrival, etc.) is very low.

- 52.5% (517/985) completely unaware; only 8.5% (84/985) fully aware → 91.5% lack full awareness.
- Two-proportion: demand concentrates in the cross-border group (68.9% vs 33.0%).
- Logistic: demand & income relate to awareness; identity does NOT.

| Method               | n / denom | Value                     | p         | Effect |
|----------------------|-----------|---------------------------|-----------|--------|
| Descriptive (Q20)    | 985       | unaware 52.5% / full 8.5% | —         | —      |
| Fisher exact (Q21)   | 259 vs 0  | 96.3% vs 0.0%             | 4.32e-143 | 0.963  |
| Two-proportion (Q28) | 434 / 543 | 68.9% vs 33.0%            | 6.20e-29  | 0.359  |
| Logistic q13_need    | 985       | OR=0.60 (z=-1.97)         | 0.04856   | 0.511  |
| Logistic income B    | 985       | OR=0.30 (z=-3.37)         | 0.0007423 | 1.207  |

Sources: online Q13/Q20/Q21/Q25/Q27/Q28; logistic AIC=584.3.

**Awareness of WPHK remittance: 91.5% lack full grasp of the key benefits (n=985)**

Source: online Q20 awareness; descriptive distribution (100% of sample), n=985, Middle tier = sample minus the two reported tiers.

## ④ Low stated resistance after early education

Among people who originally did not know WPHK, the share who state they are willing to try after being introduced is very high, indicating that the stated resistance to early awareness education is low.

- Of the previously unaware with demand, 96.3% (259/269) state willingness to try after introduction.
- Fisher exact  $p = 4.32e-143$ ; the funnel shows how the 269 base and 96.3% are derived.
- Demand concentrates in the cross-border group (68.9% vs 33.0%) — reachable base.

| Method                  | n / denom | Value                     | p         | Effect  |
|-------------------------|-----------|---------------------------|-----------|---------|
| Descriptive (Q21)       | 259 / 269 | willing after intro 96.3% | —         | —       |
| Fisher exact (Q21)      | 259 vs 0  | 96.3% vs 0.0%             | 4.32e-143 | 0.963   |
| Two-proportion (Q28)    | 434 / 543 | 68.9% vs 33.0%            | 6.20e-29  | 0.359   |
| Chi-square id x channel | 479       | chi2=86.10 (df=20)        | 3.54e-10  | V=0.212 |
| Logistic q13_need       | 985       | OR=0.60 (z=-1.97)         | 0.04856   | 0.511   |

Sources: online Q13/Q18/Q20/Q21/Q25/Q27/Q28.

Among the previously unaware with demand, 96.3% state willingness to try

Full online sample

Completely unaware of WPHK remittance

...and also has remittance demand (Q21 applicable)

Willing to try after introduction

Fisher exact: willing 96.3% vs unwilling 0.0%,  $p = 4.32e-143$

Source: online Q20/Q13/Q21. STATED intent only - not actual first-use or retention.

## ⑤ “Unaware”, not “unwilling”

WPHK's biggest problem right now is not that users do not want to use it, but that users do not know it, do not understand it, and are not clear about what benefits it offers.

- Problem side (n=985): 52.5% completely unaware, only 8.5% fully aware.
- Opportunity side (n=269): 96.3% willing to try after introduction.
- Read together: large deficit + very low resistance → bottleneck is reach & understanding, not refusal.

| Method                  | n / denom | Value                     | p         | Effect  |
|-------------------------|-----------|---------------------------|-----------|---------|
| Descriptive (Q20)       | 985       | unaware 52.5% / full 8.5% | —         | —       |
| Descriptive (Q21)       | 259 / 269 | willing after intro 96.3% | —         | —       |
| Fisher exact (Q21)      | 259 vs 0  | 96.3% vs 0.0%             | 4.32e-143 | 0.963   |
| Chi-square id x channel | 479       | chi2=86.10 (df=20)        | 3.54e-10  | V=0.212 |
| Logistic income B       | 985       | OR=0.30 (z=-3.37)         | 0.0007423 | 1.207   |

Sources: online Q13/Q18/Q20/Q21/Q25/Q27/Q28.

**Not 'unwilling' - it is 'unaware': big deficit, but very low stated resistance**

Source: online Q20 (n=985) & Q21 (n=269). Willingness is stated intent, not behavior; avoid psychological attribution.

## ⑥ Cost, not safety

Users' biggest concern is not safety, but handling fees, exchange-rate cost, and a lack of understanding of the function itself.

- Demand sample (n=479): fee/FX cost pain 80.4% (385/479) vs safety concern 12.3% (59/479).
- Bank-channel safety concern only 8.2% (20/243).
- Non-use barriers (n=220): cost-related 50.9% vs safety distrust 4.5%; +46.4 pct,  $p=1.74e-27$ .

| Method                  | n / denom | Value                  | p        | Effect      |
|-------------------------|-----------|------------------------|----------|-------------|
| Descriptive pain (Q18)  | 385 / 479 | cost top pain 80.4%    | —        | —           |
| Descriptive bank (Q19)  | 20 / 243  | bank safety 8.2%       | —        | —           |
| Two-proportion (Q22)    | 220       | 50.9% vs 4.5%          | 1.74e-27 | 0.464       |
| Logistic identity B     | 479       | OR=6.26 (z=6.16)       | 7.08e-10 | 1.834       |
| Lift / Residual (expl.) | 12 / n=3  | lift=1.48 / resid=2.61 | —        | 1.48 / 2.61 |

Sources: online Q13/Q14/Q15/Q18/Q19/Q20/Q22/Q28.

### Safety is not the primary barrier - fee / exchange-rate cost is

Source: online Q18 (pain point), Q19 (bank-channel safety), Q22 (barriers); descriptive + two-proportion z-test.

## 7 Banks Are the Primary Competitive Battleground

Defining banks as the primary competitive battleground is a statistically supported priority: bank-channel users (50.7%) significantly outnumber money-exchange-shop users (12.3%),  $\Delta=38.4\text{pp}$ ,  $p=1.75\text{e-}37$ . Offline data confirms direction (Fisher  $p=7.63\text{e-}09$ ).

- Bank-channel users account for 50.7% (243/479) of the online sample, significantly exceeding exchange shops at 12.3% (59/479).
- Two-proportion z-test confirms significantly different; offline Fisher exact is directionally consistent.
- Logistic regression controlling for amount, frequency, identity, and awareness shows identity as the strongest predictor; WPHK awareness is associated with lower bank reliance.

| Method                     | n / denom       | Value           | p               | Effect                                   |
|----------------------------|-----------------|-----------------|-----------------|------------------------------------------|
| Two-proportion z-test      | 243 vs 59 / 479 | 50.7% vs 12.3%  | <b>1.75e-37</b> | <b><math>\Delta=38.4\text{pp}</math></b> |
| Fisher exact (offline)     | 24 vs 1 / 37    | 64.9% vs 2.7%   | <b>7.63e-09</b> | <b><math>\Delta=62.2\text{pp}</math></b> |
| Logistic (controlled)      | n=479           | OR=6.26, z=6.16 | 7.08e-10        | $\beta=1.834$                            |
| Lift/co-occurrence (expl.) | n=89 / 479      | lift=1.30       | —               | 1.30                                     |

## 8 Within Bank Users: Prioritize the Cost-Dissatisfied

Cost dissatisfaction — not trust concerns — is the largest stated pain point among bank-channel users. Among bank users, 82.3% cite cost pain, only 8.2% cite safety concerns, and 45.7% prefer exchange rate offers.

| Method                  | n / denom | Value | p | Effect |
|-------------------------|-----------|-------|---|--------|
| Descriptive (cost pain) | 200 / 243 | 82.3% | — | —      |
| Descriptive (safety)    | 20 / 243  | 8.2%  | — | —      |
| Descriptive (rate pref) | 111 / 243 | 45.7% | — | —      |
| Descriptive (non-fixed) | 85 / 243  | 35.0% | — | —      |

- Among bank users (n=243), cost pain reaches 82.3% (200/243) while safety concerns only 8.2% (20/243); exchange-rate offer preference 45.7% (111/243).

- Cross-channel rate-preference comparison shows no significant channel-specific barrier.
- Correspondence analysis residual=3.06 (n=2) for 'Other' channel × 'None attractive' — exploratory, not causal.

## 8 WPHK Awareness Associated with Lower Bank-Channel Reliance

Higher WPHK awareness is associated with lower bank-channel reliance (OR=0.68,  $z=-2.36$ ,  $p=0.01826$ ). This supports awareness education for cost-dissatisfied bank users, but does not prove causal switching.

| Method                  | n / denom | Value              | p        | Effect        |
|-------------------------|-----------|--------------------|----------|---------------|
| Logistic (awareness)    | n=479     | OR=0.68, $z=-2.36$ | 0.01826  | $\beta=0.384$ |
| Logistic (identity)     | n=479     | OR=6.26, $z=6.16$  | 7.08e-10 | $\beta=1.834$ |
| Descriptive (non-fixed) | 85 / 243  | 35.0%              | —        | —             |
| Descriptive (bank cost) | 200 / 243 | 82.3%              | —        | —             |

Logistic: Bank Channel ~ Amount + Frequency + Identity + WPHK Awareness (AIC=609.8)

- Bank users with non-fixed remittance frequency = 35.0% (85/243), indicating flexible behavior potentially conducive to switching.
- **Logistic regression shows higher WPHK awareness OR=0.68 ( $z=-2.36$ ,  $p=0.01826$ ) is linked to lower reliance on banks; identity OR=6.26 ( $p=7.08e-10$ ).**

## 9 E-Wallet Users Show Higher WPHK Awareness — Suitable for Education

E-wallet/remittance-app users show higher baseline WPHK awareness. Full awareness: 7.8% (12/153) vs 0% (0/192),  $p=7.82e-05$ . Partial awareness: 41.8% (64/153) vs 0% (0/192),  $p=3.08e-23$ . This makes them suitable for further product education, but does not prove higher commercial value or actual conversion value.

E-wallet/remittance-app users (n=153) show:

- full WPHK awareness 7.8% vs 0% in control (n=192);
- partial awareness 41.8% vs 0%.

| Method                   | n / denom       | Value                  | p        | Effect          |
|--------------------------|-----------------|------------------------|----------|-----------------|
| Two-proportion (full)    | 12/153 vs 0/192 | 7.8% vs 0%             | 7.82e-05 | $\Delta=7.8pp$  |
| Two-proportion (partial) | 64/153 vs 0/192 | 41.8% vs 0%            | 3.08e-23 | $\Delta=41.8pp$ |
| Two-proportion (rate)    | 210 vs 37 / 479 | 43.8% vs 7.7%          | 2.19e-37 | $\Delta=36.1pp$ |
| Chi-square (amt×offer)   | n=479           | $\chi^2=56.38$ (df=30) | 0.00247  | V=0.153         |

Sources: online Q13/Q15/Q18/Q20/Q24. Control group: has demand, completely unaware of WPHK, non-e-wallet/remittance-app main channel. E-wallet n=153 vs Control n=192 | Education suitability, not proven conversion value

## 9 E-Wallet Channel Profile & Education Context

E-Wallet Channel Holds 31.9% of Users — Relevant for Education, but Conversion Value Is Not Proven. This segment shows higher baseline WPHK awareness and partial alignment with education messaging, but actual conversion and ROI are not measured.

- E-wallet channel holds 31.9% (153/479) of users;
- rate-preference 40.5% (62/153), aligned directionally with WPHK core value proposition.

| Method                      | n / denom        | Value                  | p        | Effect          |
|-----------------------------|------------------|------------------------|----------|-----------------|
| Two-proportion (channel)    | 243 vs 153 / 479 | 50.7% vs 31.9%         | 3.53e-09 | $\Delta=18.8pp$ |
| Descriptive (rate e-wallet) | 62 / 153         | 40.5%                  | —        | —               |
| Descriptive (rate bank)     | 111 / 243        | 45.7%                  | —        | —               |
| Chi-square (amt×offer)      | n=479            | $\chi^2=56.38$ (df=30) | 0.00247  | V=0.153 (expl.) |

Bank 50.7% E-Wallet/App 31.9%  
Exchange 12.3% Other 5.1%

## Channel Competition Synthesis & Prioritization

WPHK should prioritize bank-channel users who are dissatisfied with costs but unaware of WPHK advantages. This is a data-supported prioritization sequence based on channel size (50.7%), stated cost pain (82.3%), and WPHK awareness gaps (OR=0.68, p=0.018).

### Primary Prioritization Chain

- 1 Bank Channel Dominance | 50.7% (243/479)**  
vs Exchange 12.3% |  $p=1.75e-37$
- 2 Cost Pain in Bank Users | 82.3% (200/243)**  
vs Safety 8.2% |  $\Delta=74.1pp$
- 3 WPHK Awareness Gap | OR=0.68, p=0.018**  
Awareness ↔ lower bank reliance | AIC=609.8
- 4 Target Segment | Cost-dissatisfied + low awareness**  
Education priority | Data-supported

### Secondary Education Audience

31.9%

Channel Share

+49.6pp

Awareness Gap vs Control

40.5%

Rate Offer Preference

- E-wallet/remittance-app users: 31.9% of users
- Higher baseline WPHK awareness (+49.6pp vs control)
- Platform experience + cross-channel rate preference
- Suitable for education — NOT proven higher conversion value

## Low-Frequency User: Mr. He — Rate and Certainty Beat Convenience

*He accepts WeChat Pay HK for urgent needs, but exchange shops still win routine and large-amount scenarios.*

### INTERVIEW CONCLUSION

- His real competitor is not banks, but familiar local exchange shops in Hong Kong, especially in Yuen Long and Tsuen Wan.
- Exchange rate is the key decision factor; fees further strengthen the feeling that WeChat is “not worth it” for larger transfers.
- Risk-control and compliance concerns limit his usage. He mainly transfers to his own Mainland account to avoid possible freezing risks.

### RECOMMENDATIONS FOR WPHK

- First solve the issue of “price competitiveness”: **the exchange rate is the first priority**, and fees are the second barrier.
- **Reposition the competitor** from “banks” to “high-quality currency exchange shops,” especially street-side exchange shops in Yuen Long and Tsuen Wan.
- **Segment promotional channels by user group**: use WeChat channels to target users who frequently return to Mainland China, while for local Hong Kong users, consider Facebook, WhatsApp, and offline scenarios.

#### Cost Sensitive

Pays close attention to rates and fees

#### Backup Use

Uses WPHK when needed, not as a daily habit

#### Prefers Certainty

Values clear, safe and reliable transfers

#### Compliance Concern

Prefers formal and traceable channels

### About Mr. He

- Hong Kong local, around 55 years old Retired; previously worked in the trading industry
- Has adult children in Mainland China
- Mainly uses remittance for family support and small daily expenses Was introduced to WPHK by family recommendation

**INTERVIEW TAKEAWAY:** To convert users like Mr. He, WeChat Pay HK must improve rate competitiveness, fee perception, entry visibility, and official compliance clarity.

## Mid-Frequency User: Mr. Lu — Official Trust Enables Social Growth

*His loyalty is already strong; WeChat Pay HK should use benefits, referrals, and rate timing to activate more value.*

### INTERVIEW CONCLUSION

- **Coupon preference:** Strongly prefer Mainland merchant coupons, such as Sam's Club or Meituan, over local HK coupons.
- **Social-fission:** Referred nearly 20 users due to social fission rewards such as "new user cards"
- **Rate-sensitive:** Make transfers in a consecutive days when rates are good
- **Strong loyalty:** Refuses to try FPS top-ups or other new tools due to a learning cost

### RECOMMENDATIONS FOR WPHK

- **Scale referral mechanics:** newcomer cards, inviter rewards, team rewards, and two-sided coupons.
- **Keep official Tencent / WeChat entry points prominent** to reinforce trust and privacy confidence.
- **Add 'WeChat Pay Balance' or 'Bank Card' as 'transfer destination options** so users don't go to mini programs for adjustments.

### About Mr. Lu

- **Relocation:** Moved to Hong Kong in 2024 under the Top Talent Pass Scheme.
- **Occupation:** Works in the mechanical manufacturing industry.
- **WPHK Adoption:** Started using the service in October 2024 after a friend's referral.
- **Banking Profile:** Exclusively holds an ICBC Hong Kong account.

**INTERVIEW TAKEAWAY:** For WeChat Pay HK-only loyal users, the key is not basic trust-building, but benefit relevance, social referrals, and rate-timed activation.

## High-Frequency User: Mr. Pang — Trust Is Strong, Value Can Be Upgraded

*He is a high demand, safety-oriented loyalist; WeChat Pay HK should add more attractive campaigns and easier access.*

### INTERVIEW CONCLUSION

- Highly privacy-sensitive; Safety, Exchange Rate, and Risk Control matter most.
- Xiaohongshu (Rednote) was the key channel for him to discover WeRemit and other WeChat Pay promotions, and then recommended WeRemit to others.

### RECOMMENDATIONS FOR WPHK

- Launch the team-based rate campaigns like “WeChat Pay Global Gifts” activity:  
One leader plus up to four team members to unlocks better rates.
- Make WeRemit easier to find through WeChat Discover, Moments ads, Official Accounts platform and click-to-use entries.

### About Mr. Pang

- Around 28 years old from Mainland China;
- He has worked in Hong Kong for about 5 years;
- He firstly used Alipay, but his account was freezed.

**INTERVIEW TAKEAWAY:** For high-frequency users, WeChat Pay HK should convert existing trust into visible privileges, stronger cost benefits, and easier access.

## Conversion Strategies For WeChat Pay HK

---

## WeChat Pay HK's Conversion Strategies

*The recommendations are organized exactly around the four sections in the source document.*

### Product & Service

*Segmented media channels, offline public exposure and Tencent + HK compliance trust endorsement.*

### Promotion

*Permanent entry, recipient destination switch, benefit-led reminders, risk-control UI and escalation support.*

### Community Referral

*Prioritize rate competitiveness first, then reduce or soften fee barriers.*

### Exchange Rate

*Instagram private domain, two-sided incentives, KOC mechanism and team-up lower-rate campaigns.*

1.1

## Product & Service: Easier to Access Entry Points

One-click promotion access: Add WeRemit exposure in Discover, Moments ad areas and other natural in-app positions.

WeChat Discover Page Ads

WeChat Main Personal Page Ads

Official Accounts Platform Ads

WeChat Moments Ads

### Benefits:

Users can use WeRemit just one click when they saw it in these scenarios on WeChat.

### Expected Effect:

Lower search cost, better recall, and more repeat use among both low and high frequency users.

1.2

## Product & Service: Add a Quick Receiving-Destination Switch

The notes identify the service improvements: recipient-destination switching

### Destination Switch

In response to the pain points of complicated switching after first choose a transfer path, WPHK should add a shortcut selector on the “Remittance to Contact Person” page:

**Receive to : Bank Card / WeChat Balance**

### Expected Effect

To reduce the users' operation cost and make a smoother repeat-transfer experience.

## 1.3

## Product & Service: More Practical Common Questions

*For larger transfers, uncertainty itself becomes a barrier even when users trust Tencent as a brand.*

### Common Questions Page

#### Who can I remit to?

Clarify eligible recipients and permitted transfer relationships.

#### Why fill in purpose?

Explain compliance logic without making users feel accused.

#### Will review be triggered?

Show whether different amount tiers may need review.

#### What are the limits?

Display single-transfer and periodic quota information clearly.

#### What if it fails?

State whether funds are returned and how long it takes.

#### Who handles problems?

Name the support path for review, freeze or delay cases.

1.4

## Product & Service: Customer Service & AI Assistant Function

Provide an appeal path for "what to do if there is a problem" to help customer solve their problems faster and easier.

WeRemit - Contact Customer Service Function

WeRemit - "Remittance" Main Page

Tenpay Global - AI Assistant (AI助手)

## 2.1 Promotion: Expand Multi-Online Platforms Advertisements

For the audience who often or only used:  
*Instagrams, FaceBook, TikTok, WhatsApp, and etc...*

**WeChat Pay HK should add more advertisements on these online media platforms.**

Instagram

Facebook

TikTok

Whatsapp

## 2.2 Promotion: Use Offline Public Exposure as the Core Awareness Lever

**50%+**

Potential user conversion intention

**Key Priority:  
Raise brand awareness**

Overcome the distinguished social media promotion habits from mainland to Hong Kong

# HOW?

## 2.2 Promotion: Use Offline Public Exposure as the Core Awareness Lever

WeChat Pay HK's competitor: “Alipay HK” has taken the first mover advantage

MTR Station - CauseWay Bay

Central Food Market

## MTR stations

Daily repeated exposure

## High-speed rail / West Kowloon

Cross-border intent

## Airport

Trust & Scale cue

## Hong Kong Tram

Hong Kong unique transportation exposure

## 2.3 Promotion: Make Trust Endorsement Highly Visible

Local Hong Kong audiences have strong brand awareness and **risk-prevention** psychology when choosing financial tools.

Tencent official brand  
+  
HK regulatory compliance  
+  
clear safety language

**Tencent**

### Tencent Official Endorsement

Use the Tencent master brand as a credibility anchor.

### Hong Kong local compliance

In 2016, WPHK was among the first batch of companies to obtain a stored value payment facility license issued by the Hong Kong Monetary Authority (HKMA).

### Safety as conversion catalyst

Turn "secure and trustworthy" into a reason to cross the usage threshold.

3

## Community, Referral and User Growth

Build community strategy around the user decision journey

### Community Strategy Logic

#### From Awareness to First Remittance to Referral

Community strategy should not be designed only to drive exposure or engagement.

Its role is to improve conversion across the full journey — from awareness, to first remittance, to referral.

### Objective: Answer four key user questions

#### Trust

Do I trust it?

Is it safe, compliant, and reliable?

#### Value

Is it worth using now?

Is the value proposition clear and relevant to my real needs?

#### Action

Can I use it right away?

Is the path to first use simple and immediate?

#### Referral

After using it, would I recommend it to others?

Do I have enough motivation to recommend it to others?

## 3

## Community, Referral and User Growth

*Build a localized community growth engine*

### 3.1 Build a localized Channel Community for HK users

- Build a channel community (such as Ins, WhatsApp) targeted at Hong Kong users who frequently travel to Mainland China for shopping, dining, and everyday consumption.
- Channel messages can reach users more directly through the DM inbox, reducing dependence on feed algorithms and creating a stronger sense of a private “members-only” circle.

### 3.2 Make the Channel a “benefit moat”

- The Channel should function as a practical benefit hub for cross-border remittance and cross-border spending.
- WPHK can regularly offer:
  - limited-time fee-waiver codes,
  - exclusive merchant coupons,
  - exchange-rate alerts during favorable windows,
  - time-sensitive offers tied to specific spending occasions.

The Channel should be positioned as a localized, utility-driven community touchpoint — not a content feed, but a retention and conversion channel.

The goal is to create a clear reason for users to stay subscribed, check frequently, and associate the channel with real utility rather than advertising.

3

## Community, Referral and User Growth

Build a structured member-get-member growth mechanism

### 3.3 Two-sided referral incentives - Lower the barrier to sharing

- Users may be willing to recommend WPHK, but most will not actively do so without a clear incentive.
- WPHK should reward both the existing user and the new user through:
  - exchange-rate discounts,
  - fee waivers,
  - or shopping vouchers.

This is especially effective when WPHK pricing is already close to offline money changers, as an additional referral benefit can push hesitant users to try online remittance for the first time.

### 3.4 Tiered Partner program — scale high-performing advocates

推廣期：即日起至26年3月31日

**邀請新用戶匯款**

**最高得 200 HKD 通用券**

**20 HKD x10**
